

# Go-Hoard™

A Revolutionary Sustainable  
PVC Site Hoarding

## Product Overview

**Made from Recycled Plastic**  
Go-Hoard panels are manufactured using waste recycled plastics, an eco-conscious hoarding system

**100% Recyclable**  
PVC hoarding panels are fully recyclable. Ask us about our end of life recycling service!

**Available In-Ground or On-Ground**  
Designed for use with or without excavation to suit site requirements

**Flat Faced Hoarding**  
Ideal surface for adding safety signage or hoarding graphics retrospectively

**Corporate Branding**  
Available extruded in your corporate colours with custom coloured trims

**Weather Resistant**  
Highly resistant to weather damage unlike timber hoarding alternatives

## Accessories

Go-Hoard™ is available with various accessories designed to create a more practical, safer and more accessible fencing system.

Vehicle Gates

Pedestrian Gate

Bi-Folding Vehicle Gate

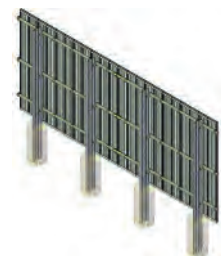

Safety Signage

## Product Options

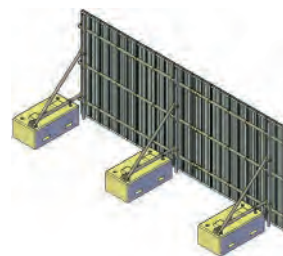

Go-Hoard™ can be customised in the following ways to suit the customers' requirements and the environment

### In-Ground / On-Ground

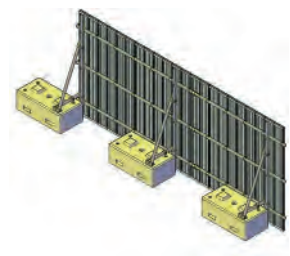

Available as an excavation free system or dug in-ground to suit site environment

In-Ground

On-Ground (End-on Blocks)

On-Ground (Parallel Blocks)

### Custom Colours

Available extruded in any BS / RAL colour of your choosing to suit company branding

### Ballast Positioning

The on-ground system kentledge blocks can be positioned to suit site requirement

End-on

Parallel

# Go-Hoard™ Panel Recycling

Go-Hoard™ PVC hoarding panels qualify for our plastic waste collection scheme; at end-of-life we can arrange collection of the panels to recycle them into new products for the construction sector.

## What is Our Waste Collection Scheme?

The plastic waste collection scheme is a working project to reduce construction site waste sent to landfill by arranging collection, recycling and re-using of plastic waste. Construction products that fall within the plastic waste category include fluted polypropylene, signage boards, guttering, drainpipes, PVC window frames, external cladding and PVC temporary protection materials.

**WE'RE RECYCLING OVER  
10 MILLION KILOS OF  
WASTE PLASTIC EVERY YEAR**

## How Our Recycling Scheme is Supporting a More Sustainable Construction Sector

We have a dedicated recycling facility in the midlands with state-of-the-art machinery that can recycle most forms of plastic irrespective of minor waste contamination (such as adhesive tapes).

We're currently recycling over 10 million kilos of plastic every year, turning waste plastic into reusable products in the construction sector.
